

Thomas Jefferson Powerpoint Bullets for 6/21/2010
Operational Period 6/20/2010 Sampling Period

- Six stations, TJ48 – TJ53, were sampled during the operational period.
- All stations were sampled for: TPH, VOAs, and oil dispersion (CTD fluoremetry and dissolved oxygen).
- No samples were collected for bioassay using the Rototox test.
- Significant fluorescence found for most of these sample stations at the 10m level, correlating to an decrease in DO.
- One station showed a decrease in DO at a depth of approximately 28m that was not associated with a fluorescence signal.
